Control mechanisms to prevent the smuggling of kit and equipment

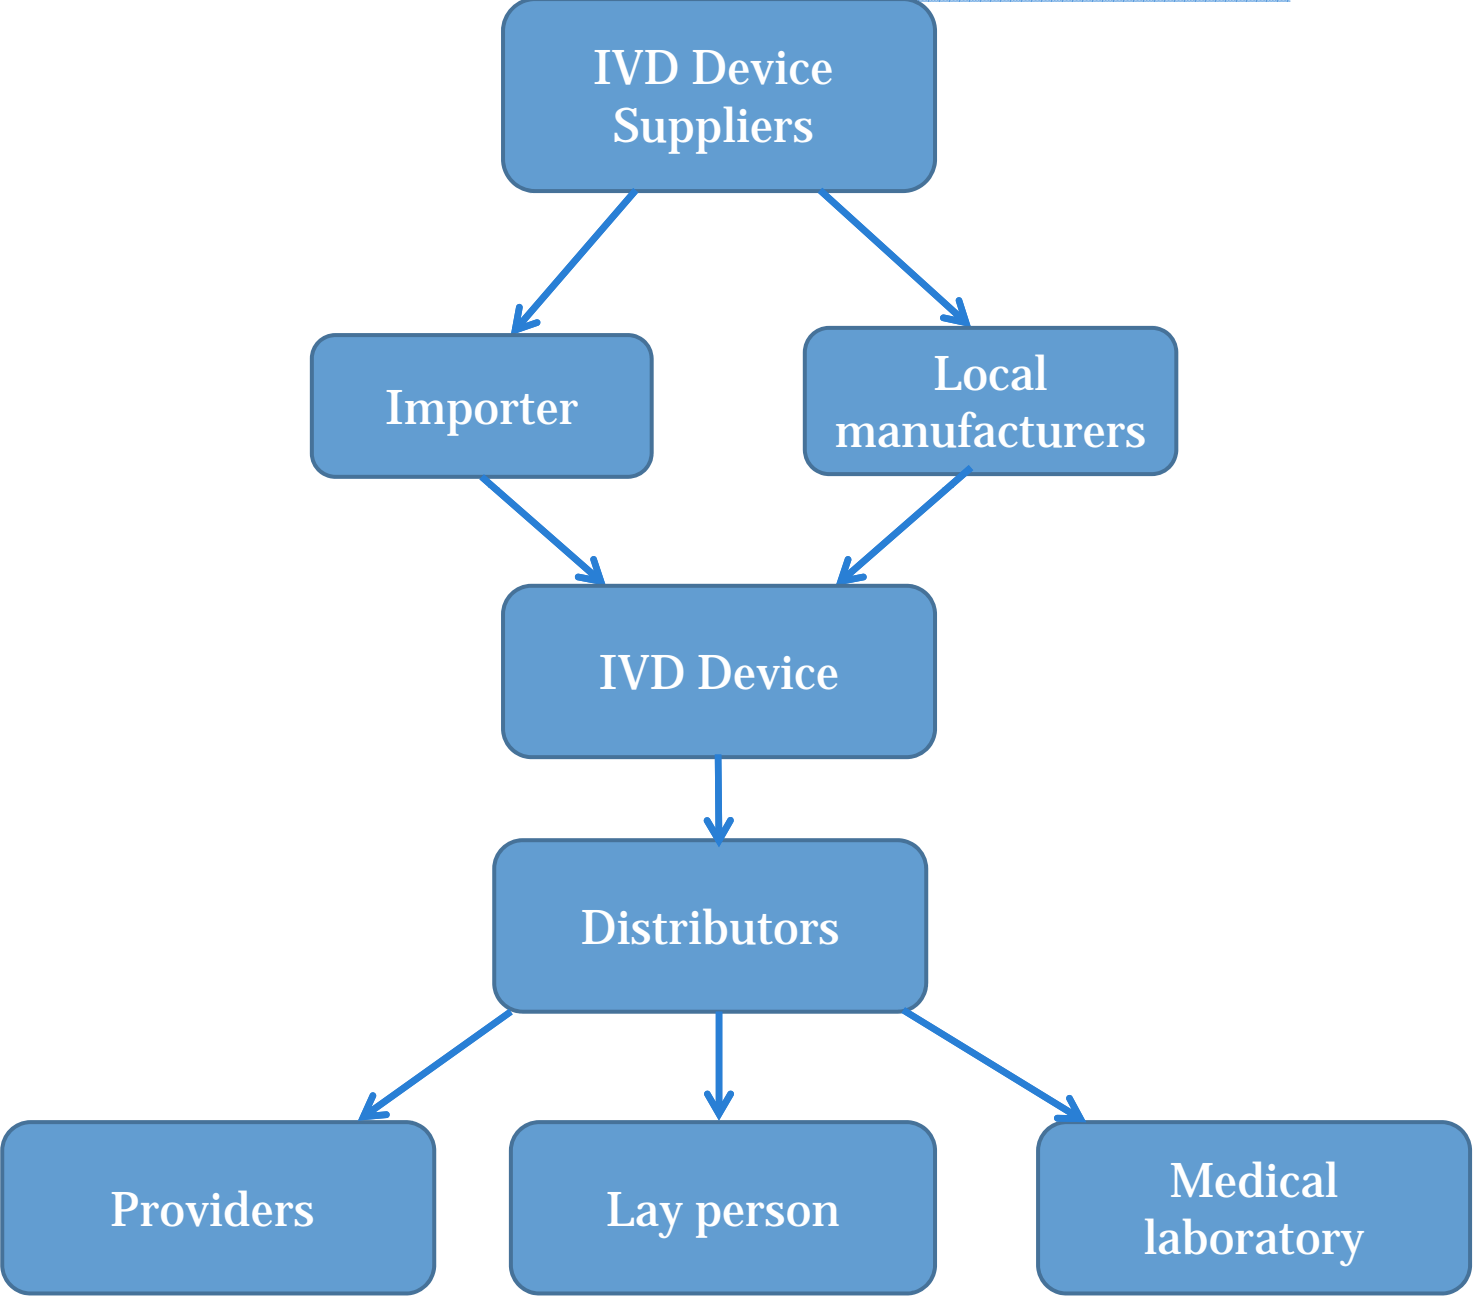

By :mohammad Ali Heidari

The pathway of IVD device from production to consumption

وزارت بهداشت درمان و آموزش پزشک
مرکز مدیریت و هماهنگی امور بازرگانی

The first and the most important step to prevent from smuggling of IVD Device is the ability to identify the authenticity of IVD device by all beneficiaries specially end users.

The measures taken to achieve this include

1. Identification System for medical device companies

2. Registration System for representative of international medical equipment companies (just for importer companies)

3. Registration System for medical devices (imported and domestically manufactured)

4.Import and clearance system for medical devices

5.Supervision /Surveillance system for manufacturers and exporters of medical devices.

6.The system of supervision on distribution of medical devices.

7. The system of supervision after sell services.

8. The information exchange system (web services)

The other measures have taken by ministry of health for prevention of smuggling of commodity are as follows:

1. Random sampling of IVD Devices from customs.

2. Tracking, tracing and authentication control system of IVD Devices.
