

DESIRABLE BIOLOGICAL VARIATION DATABASE SPECIFICATIONS

Updated for 2014! Desirable Specifications for imprecision, inaccuracy, and total allowable error, calculated from data on within-subject and between-subject biologic variation. This database is updated and compiled by Dr. Carmen Ricos and colleagues. We are honored to be able to host this database.

Desirable Specifications for Total Error, Imprecision, and Bias, derived from intra- and inter-individual biologic variation

This most recent and extensive listing of biologic goals has been provided by Ricos C, Alvarez V, Cava F, Garcia-Lario JV, Hernandez A, Jimenez CV, Minchinela J, Perich C, Simon M. "Current databases on biologic variation: pros, cons and progress." *Scand J Clin Lab Invest* 1999;59:491-500. *This database was most recently updated in 2014.*

Annex I, Part I: Within-subject and between-subject CV values of analytes and *Desirable Analytical Quality Specifications for imprecision, bias and total error*

Note on abbreviations:

CV_w = within-subject biologic variation

CV_g = between-subject biologic variation

I = desirable specification for imprecision

B = desirable specification for inaccuracy

TE = desirable specification for allowable total error

	Analyte	Number of Papers	Biological Variation		Desirable specification		
			CV _w	CV _g	I(%)	B(%)	TE(%)
S-	11-Desoxycortisol	2	21.3	31.5	10.7	9.5	27.1
